SUMMARY

Recent Computer Engineering graduate building mobile and web applications across the React Native and React ecosystems. In my current internship, I developed a React Native application end-to-end, gaining hands-on experience with RESTful API design, SQL/NoSQL database management, and Firebase integration, along with debugging and resolving issues in a live production environment. I further strengthened this foundation through technical analysis work on a TÜBİTAK-funded R&D project.

EDUCATION

Zonguldak Bülent Ecevit University | Computer Engineering (B.Sc.)

Graduated: June 2026

EXPERIENCE

Eterna Teknoloji | Mersin

August 2026 – Present

Mobile Application Development Intern

- Built a mobile application from scratch end-to-end using React Native and TypeScript, implementing Firebase Authentication, Firestore data modeling, and backend services with Firebase Cloud Functions.
- Conducted comprehensive quality control and user-scenario testing on the company's live App Store application; identified and resolved critical production issues, improving overall system stability.
- Built a scalable, resumable automation script for the company's Lipyum application, integrating the Iconify REST API to regenerate icon and visual assets across 9,000+ service categories.

Speedsoft Yazılım

July 2025 – September 2025

Software Development Intern

- Developed modular, reusable React components for a financial management platform; shipped new features to production based on business requirements and resolved production issues.
- Contributed to the UI design and state management of a React Native mobile application within two-week Agile/Scrum sprint cycles, using Git for version control.

GDG Zonguldak (Google Developer Groups)

October 2025 – Present

Sponsorship Team Lead

- Coordinated sponsorship and operations processes within the developer community; built corporate partnerships and led the organization of large-scale technology events.
- Organized Git and GitHub workshops for the technical team, sharing version control practices and contributing to technical content creation and knowledge-sharing efforts.

PROJECTS

OwnWay : AI-Powered Career Management System | React Native, Node.js, PostgreSQL, RESTful API

- Developed scalable Node.js REST API services, under a TÜBİTAK 2209-A grant, to analyze student data.
- Optimized the PostgreSQL database architecture and integrated AI models delivering career recommendations into the backend.

Pixel Art Challenge | React Native, TypeScript, Firebase (NoSQL)

- Built a mobile app with React Native and TypeScript, featuring drawing, daily challenge, and voting modules.
- Implemented authentication with Firebase Auth, NoSQL data modeling with Firestore, and an automated challenge cycle using Cloud Functions.

Color-Blindness Support via Image Processing | Python, OpenCV, NumPy, K-Means Clustering

- Developed a color-separation system for users with deuteranopia using the LMS color space and K-Means clustering algorithms.
- Optimized the algorithmic pipeline to reduce color confusion and documented the results in an academic report format.

Turkish Tile Art Motif Detection | Python, YOLOv8, Streamlit

- Trained a YOLOv8-based computer vision model to detect and classify tile patterns and symbols.
- Improved model accuracy through data augmentation and built a user-testing interface with Streamlit.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, SQL

Frameworks & Libraries: React, React Native, Node.js, Express, OpenCV, YOLOv8, Streamlit

Databases & Cloud: PostgreSQL, MongoDB, Firebase (Auth, Firestore, Cloud Functions)

Languages: English(B1)

Interests: Fitness, Yoga, Reading, Running, Hiking, Journaling
